Subject: Interface Charts, Volume 2

The Information Interface forms of Section 4.2 of Volume 2 have been separated into four groups and within these groups sorted in a hierarchical order. This arrangement was selected in the belief that readers would have interest in activities and/or functions and that it would be convenient to have the interfaces relating to that function grouped together. At the same time, this arrangement placed all system inputs and outputs in a single group and similarly separated and identified the interfaces between major activities. To assist the reader in finding particular forms, page reference indexes by activity for each section and a master page index ordered by interface reference number are provided.

It is now apparent that the sheer bulk of this pre-publication version of the report makes it cumbersome to search for the interfaces related to particular flow charts. We would suggest, therefore, that if you intend to make such cross-references, it may be more convenient to remove the interface forms from this document and bind them in a separate folder, either retaining the present order or, preferably, by sorting in reference number sequence.

If experience by Center personnel in using this report favors the above suggestion, we would propose to submit the interface charts as a separate volume (Volume 3) when the report is printed.
